

Swisscom Trust Services provides its partners with simple signature processes and identification - secure, recognised in the EU and Switzerland.

## Regulated seal for authorities

# The remote signature service from Swisscom Trust Services

A seal for public authorities is basically an approved electronic signature for legal entities that can be used to sign contracts, outgoing mail, official publications, decrees, certificates and other documents typically issued by a public authority. Unlike the personal electronic signature, it cannot not automatically be substituted with the handwritten signature, but is nevertheless anchored in some laws and regulations. The authority seal is precisely defined by the Technical Administrative Regulations (TAV) to the Signature Act.

#### Legally recognised

Swisscom Trust Service is the only European service provider for recognised, qualified and advanced signatures as well as regulated/qualified or advanced seals in both the Swiss legal area (ZertES Act) and the European legal area (eIDAS Regulation).

## Validator green, Adobe - green tick

The regulated seals for authorities can be checked for validity in the Validator of the Confederation and are marked with a green tick in Adobe Reader.

#### Typical use cases

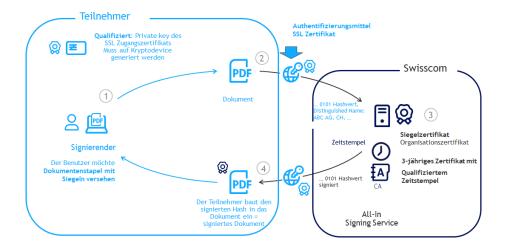

Seals are suitable for automated batch operation because they do not depend on individual approval. For example, they can be used in the mass output and archiving of official documents, or even give contracts with scanned signatures at least integrity protection.

#### Sealing application of the partner (participant application)

Swisscom Trust Services offers sealing options for public authorities together with partner solutions approved for this purpose. Via an encrypted connection (TLS) and the authority to use the TLS connection by a responsible person of the authority, these solutions ensure that the sealing process is only applied to documents intended for this purpose. Only a hash value is transmitted to the Swisscom trust services; the document contents remain hidden from Swisscom.

#### Qualified time stamp

Each seal is linked to a qualified time stamp for long-term evidence.

# Facts & Figures

<b>63</b>	OASIS Rest or Soap API
Simply	To integrate the partner sealing applications
<u></u>	Authentication
Secure	TLS authentication with specially protected private key to TLS certificate:  Advanced seal: 1 factor (ownership)  Qualified or regulated seal: 2 factors (e.g. possession and knowledge, e.g. specially secured access to the private key in the database or HSM).
Durable	Signature certificates
	Fiduciary production of 3-year organisation certificates for seals, each regulated
	Qualified time stamps
	Free additional signature with qualified time stamp according to ZertES / eIDAS
	Long-term validation
	All signatures are thereby long-term validated according to the ETSI standard LTV
<u></u>	Application
Qualified	Verification of the organisation (O) and the sub-organisation (OU) against the provisions of OFCOM's Technical and Administrative Regulations (https://www.bakom.admin.ch/bakom/de/home/digital-und-internet/digitale-kommunikation/elektronische-signatur.html), personal identification of the applicants (authorised representatives of the organisation) and qualified signature of the seal certificate application. Authorized partner solution with 2FA access for the private key of the TLS authentication certificate (regulated).
POF	Signature applications
	Regulated: Only already authorized Swisscom Trust Service applications for the service with regulated seals
Segally compliant	Data protection - transmission of document hash values only (compressions)
	No knowledge about document content possible by Swisscom
