

Swisscom Trust Services enables easy signature processes and identification for its partners - secure, recognised in the EU and Switzerland.

Signing Service

Swisscom Trust Services

Open - Regulated - Compliant: Smart Registration & Signing Service

The remote signature service from Swisscom Trust Services

The advantages of the electronic signature are clear: efficient processes without media discontinuity, no paper consumption, no costs for logistics, scanning, printing, and dispatch. Numerous Swisscom Trust Service Partners offer signature applications for this purpose. Or they integrate the signature option into existing solutions, such as an ERP or contract workflow system. People can register for the signature - or register by an identity provider, such as a bank. Signatures are conveniently approved with a fingerprint or a smile via an app in the mobile phone. It is even more convenient if the existing app of the house bank can be used for this purpose.

Legally recognised

Swisscom Trust Service is the only European service provider for recognised, qualified and advanced signatures in both the Swiss legal area (ZertES Act) and the European legal area (eIDAS Regulation). The qualified signature is equivalent to the handwritten signature in many cases.

Open to the best solutions on the market

Swisscom integrates the best identity verification and approval methods available on the market, ensures legal admissibility and invites the major players on the market to use their existing identities. They can monetise their KYC basis in the Swisscom Signing Store.

White Label

Signature application partners integrate the Swisscom backend - white labelled. Swisscom does not receive any document content.

Strong partner

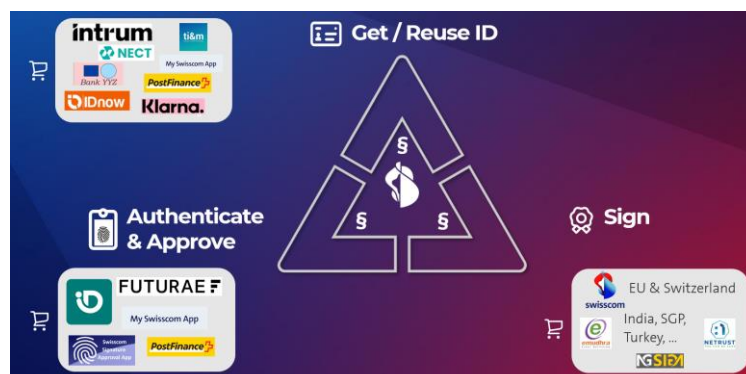

With more than 15,000 employees, the Swisscom Group including Swisscom Trust Services AG is the largest IT company and IT security leader in Switzerland and a strong global brand.

Register once - sign quickly as often as you like

Identify once - sign as often as you like. And all within 2 seconds with PIN or fingerprint.

Sign worldwide

The private signature key in secure data centres in Switzerland and an official signature from Singapore - this is also possible with many countries.

The information in this document does not constitute a binding offer. It is subject to change at any time. Swisscom expresses its opinion and view in this document, also with regard to legal assessments. It is the sole responsibility of each party concerned to study the circumstances carefully and to draw its own conclusions. Swisscom recommends consulting experts if necessary.
